Objective

Entry-level software developer with hands-on experience building end-to-end applications, from ML models to Django and React web apps. Seeking to apply my knowledge and skills in Python, AI/ML, and full-stack development to build data-driven solutions and grow as an engineer.

Education

- **Malla Reddy Engineering College** - Hyderabad, Telangana | 2022 - 2026
  Bachelor of Technology |Computer Science and Engineering (AI & ML) | CGPA: 8.2
- **Scholars Junior College** - Makthal, Telangana | 2019 - 2021
  (M, P, C) | Board of Intermediate Education, Telangana | Aggregate: 88.8%
- **Bharathi Vidya Niketan High School** – Makthal, Telangana | 2019
  Board of Secondary Education, Telangana |CGPA: 9.2

Technical Skills

- **Programming Languages:** C, Python
- **Frontend Technologies:** HTML, CSS, JavaScript,
- **Frameworks and APIs**: React.js, Django, Django REST Framework, REST APIs.
- **Database:** SQL
- **AI/ML and Libraries:** NumPy, Pandas, Matplotlib, scikit-learn, TensorFlow, keras
- **Machine Learning:** Supervised and Unsupervised learnings, Model development, evaluation and Deployment
- **Development Tools:** VS Code, GitHub, Git, PyCharm
- **Software Development:** Data Structures and Algorithms, OOPS, Software Development Life Cycle.

Work Experience

EDUNET Foundation (AICTE collaboration) - Bengaluru, India
AI & ML Developer intern April 2025 - May 2025

- Built a Heart Disease Prediction model in Python and Scikit-learn, performing EDA, preprocessing, and feature scaling on 300+ patient records.
- Trained and compared 5 ML models (Logistic Regression, KNN, Decision Tree, Random Forest, SVM), reaching 90% accuracy with Random Forest.

R^2 Educational services - Hyderabad, India
Junior Developer Internship March 2023 – May 2023

- Developed a responsive client-side Book Recommendation web app using HTML, CSS, JavaScript, and React.js.
- Built interactive UI components and optimized frontend performance for a smoother user experience.

Projects

Leaf Disease Detection System (Code) March 2025 - June 2025

- Built a CNN-based deep learning model with TensorFlow, Keras and OpenCV to classify plant leaf diseases across multiple classes.
- Trained on 500+ leaf images with image preprocessing, achieving 92% prediction accuracy.
- Implemented real-time prediction so users can upload a leaf image and get an instant disease classification.

Job pilot: Job Application Tracker and Resume Analyzer (code) July 2026 – September 2026

- Built a full-stack job tracker with a Kanban board and dashboard using React, Django REST Framework, REST APIs and SQLite.
- Developed an ML resume analyzer using scikit-learn (TF-IDF, cosine similarity) that scores resume-to-job-description match.

Decentralized Research & Collaboration Platform (Code) August 2025 – April 2026

- Built a full-stack blockchain application with Python, Django, and Solidity smart contracts on Ethereum, using Web3.py for secure, transparent, and tamper-proof data storage.
- Implemented role-based dashboards for researchers and funders to submit, approve, and track funding proposals.

Certifications

- **Foundations of AI and ML -** Edunet Foundation in collaboration AICTE and Microsoft.
- **Web Development -** R Square educational services.
- **C and Python programming workshops -** Skilltimate Technologies**.**
