Objective

Seeking an Entry Level opportunity as a Software Engineer, Python Developer, or AI/ML Engineer in an Organization where I can apply my technical knowledge, improve my skills, and contribute to the growth of the company while building my professional career

Work Experience

- AI & ML Developer intern** – EDUNET Foundation (AICTE collaboration) Apr 2025 - May 2025
- Engineered and deployed a ML-based Heart Disease Prediction web application using Python, Django, and Scikit-learn, achieving 90–95% model accuracy.
 - Built a responsive frontend using HTML, CSS, and JavaScript, reducing user input time by 30% and enabling real-time predictions with <2s response time.
 - Processed and analyzed 1000+ patient records, implementing data preprocessing and training 5 ML models to achieve up to 90% prediction accuracy.

- Junior Developer Internship** -- R2 Educational Services Mar 2023 - May 2023
- Developed a responsive Book Recommendation web application using HTML, CSS, JavaScript, React.js to deliver personalized and user-friendly book suggestions.
 - Implemented responsive, interactive UI components and optimized frontend performance to enhance user experience
 - Collaborated in requirement analysis, feature implementation, and testing following SDLC practices

Education

- Malla Reddy Engineering College** - Hyderabad, Telangana 2022 - 2026
Bachelor of Technology | Computer Science and Engineering (AI & ML) | Aggregate: 82%
- Scholars Junior College** - Makthal, Telangana 2019 - 2021
(M, P, C) | Board of Intermediate Education, Telangana | Aggregate: 89%
- Bharathi Vidya Niketan High School** – Makthal, Telangana 2019
Board of Secondary Education, Telangana | Aggregate: 87%

Technical Skills

- Programming Languages** : C, Python
- Frontend Technologies** : HTML, CSS, JavaScript, React.js, Django
- AI/ML and Libraries** : NumPy, Pandas, Matplotlib, scikit-learn, TensorFlow, keras
- Database** : SQL
- Development Tools** : VS Code, GitHub, Git, PyCharm
- Software Development** : Data Structures and Algorithms, OOPS, Software Development Life Cycle.

Projects

- Leaf Disease Detection System** ([GitHub](#)) March 2025 - June 2025
Developed a CNN-based Deep learning model using TensorFlow, Keras, and OpenCV. Trained on 500+ leaf images across multiple disease classes with 92% prediction accuracy. Implemented image preprocessing and real-time prediction to enable fast, accurate classification of multiple plant diseases from user-input images
- Heart Disease Prediction Using Machine Learning** ([GitHub](#)) May 2025
Built an end-to-end ML model using 5 algorithms on a 1000+ record dataset, to predict cardiovascular risk. performed data preprocessing, feature scaling, and model evaluation in Python (Scikit-learn). Delivered 94% accuracy (ROC-AUC: 1.00) using a Random Forest classifier.
- Decentralized Research & Collaboration Platform** ([GitHub](#)) August 2025 – April 2026
Developed a full-stack blockchain application using Python, Django, and Solidity smart contracts on Ethereum, integrating Web3.py for secure, transparent, and tamper-proof data storage; built role-based dashboards enabling researchers and funders to submit, approve, and track funding proposals.

Certifications

- AZURE AI FUNDAMENTALS (AI-900)** -Microsoft.
- Foundations of AI and ML** - Edunet Foundation in collaboration AICTE and Microsoft.
- Web Development** - R Square educational services.
- C and Python programming workshops** - Skilltimate Technologies.
